BMFont

This class contains a `java.awt.Font`, a `FontMetrics`, and the font data. `bmf` files are generally very small (under 2k) A bitmap font contains a base font (common fonts are available) Using a bitmap font allows you to get rid of the horrible anti-aliasing used by `java.awt.Font` Like fonts there are `BitmapFonts` (`bmf`) `BitmapFonts` are faster and their resolution is independent of the text size It's also possible to add images to `BitmapFonts` for special characters This class is heavily inspired from the `FreeType` implementation of the `bmf` file format used by the `FreeType` library. Our mission is to make our customers satisfied with the software that they use every day. Softemps is a leading supplier of commercial and free content of software products for windows, linux and other operating systems including mobile devices, offering an impressive range of software including business solutions, educational solutions, entertainment software, Internet tools and utilities.Q: Connect to Netezza database from web application I have a web application that does some work to a Postgresql database. I'd like to do some of that work using a Netezza database. What's the best way to do this? Is there a way to export data from Postgres and import it into Netezza? Is there a way to run some SQL directly against Netezza? I'm not opposed to switching to another database and would be open to that if it can help me out. A: I recently implemented a similar solution.

What's New In BMFont?

BMFont provides a very simple interface for displaying `BitMap` fonts with 2D text, even with text effects. The appearance of the text can be adjusted by the "size" of the bitmap (the width and the height of the font), the font's "rotation", the "orientation" ("portrait" or "landscape"), the "darkness" (the global darkness of all characters in the font), and the "gravity" (the difference in size between the characters) of the font. `bmfont` support all popular bitmap fonts (using the built-in system fonts) such as `Verdana`, `Times New Roman`, `Courier New`, `Cursive`, `Wingdings`, `Symbol`, `Zapfino`, and others. The last example would display this image: BMFont Usage:

```
import com.babylon.samples.myapp.*;
import com.babylon.samples.myapp.vertex.BMFont;
public class UseBmFont {
    private static void main ( String [ ] args ) {
        // using SystemBitmapFontFactory class instance BMFont font =
        new SystemBitmapFontFactory (). new BMFont ( );
        font. setFontSize ( 15 );
        font. setGravity ( BMFont. Gravity. LEFT );
        font. setRotated ( 120 );
        font. setOrientation ( BMFont. Orientation. LANDFACING_DOWN );
        font. setFaceName ( "Times New Roman" );
        font. setFaceStyle ( SystemBitmapFontFactory. FaceStyle. NORMAL );
        font. createFontTexture ( "font_file.png" );
        // the image will be displayed // the width and the height of the bitmap font here are 1, 1. height and width of the original image
        // so if you want the image to occupy the size of the bitmap font to be displayed // just change them to whatever you need.
        Text t = font. createText ( );
        t. setWidth ( 60 );
        t. setHeight ( 30 );
        t. setAlignment ( BMFont. Alignment. RIGHT_TOP );
        t. setAlignment ( BMFont. Alignment. CENTER );
        t. setShadow ( true );
        t. setShadowColor ( Color4f. white );
        t. setShadowOffset ( 5, 5 );
        t. setShadowBlur ( 10 );
        t. setShadowOpacity ( 0.3f );
        t. setShadowPreserve3D ( true );
        t. setText ( "Hello World" );
        TextItem item = font. createTextItem ( );
        item. setColor ( Color4f. darkBlue );
        BMFont. createTextItem () and TextItem. createTextItem () are methods provided in BmFont to easily create a TextItem object ( which contains all information about a text item )
```

System Requirements For BMFont:

Minimum: OS: Windows XP SP3 and newer Processor: AMD K-series or Intel Core2 Duo or equivalent Memory: 4 GB RAM Graphics: ATI RADEON X1300 or NVIDIA Geforce 7500 DirectX: Version 9.0c Hard Disk: 20 GB available space Sound Card: DirectX 9.0c compatible sound card Network: Broadband Internet connection Additional Notes: Digital Chaos client is a standalone application and will not require WoW installation.
