

The full text version of this article is available to authenticated members of the original publisher. For several years, the growth in the number of people with diabetes has been alarming. In Europe, the number of adults with diabetes will exceed 600 million, and the number of children with diabetes will triple, according to a report published by the World Health Organization (WHO). Fortunately, some of the most effective ways to prevent and control this health threat can be found in the foods we choose to eat. Healthy eating can be an important part of the diabetic person's life. People with diabetes have higher rates of heart disease and strokes, as well as nerve, kidney and eye complications compared to the rest of the population. And they face other risks, including a high risk of premature death. The typical Western diet is high in fat and contains foods that are high in added sugar, salt and added trans fats. These are not only bad for your health, but can complicate good control of blood glucose levels and sometimes even lead to low blood sugar levels. The WHO report says that unhealthy diets, including high intake of sugar, and not enough fruits, vegetables and whole grains, are the second-leading cause of death worldwide. Lifestyles that include physical inactivity and drinking too much sugar-sweetened beverages also are associated with higher rates of overweight and obesity in people with type 1 and type 2 diabetes. To help people with diabetes control their blood glucose levels, a healthy diet can help. The present study reports on a case of pseudo-Crohn's disease presenting with the symptoms of Peyronie's disease. The case adds new information on the natural history and pathogenesis of this unusual disease. A 54-year-old man presented with painful penile deformities. Diagnostic studies ruled out urinary tract infection and infectious origin. Patients presented an intramural tissue mass involving the penile ventral tunica albuginea, and penile soft-tissue thickening was detected by ultrasound. Pseudo-Crohn's disease is a well-known condition that can mimic Crohn's disease and has been reported in the literature. The pathogenesis is still unclear. Surgical biopsy and short-term follow-up suggest that the disease is an inflammatory process. Penile deformation is reported with Peyronie's disease but has not been previously reported with pseudo-Crohn's disease.Q: Does the screen reader need to understand HTML in order to read it? I
